GaussianCoulomb[x, y, sigx, sigy] returns the electromagnetic force $f_x + if_y$ at the coordinates (x, y), generated by a Gaussian bunch with sizes (sigx, sigy)= (σ_x, σ_y) . Its derivative at the origin is

$$\frac{\partial f_x}{\partial x} = -2 \frac{x}{\sigma_x (\sigma_x + \sigma_y)},$$

$$\frac{\partial f_y}{\partial y} = -2\frac{y}{\sigma_y(\sigma_x + \sigma_y)},$$

$$\frac{\partial f_y}{\partial y} = -2\frac{y}{\sigma_y(\sigma_x + \sigma_y)}.$$
