fringe is expressed by $\exp(:H:), \qquad H = -B_z/(8p^2B\rho)p_{\phi}p_r,$ (195)

Disables the nonlinear fringe of solenoid if nonzero. The default is 0. The transformation for the nonlinear

where $p_{\phi} = xp_{y} - yp_{x} \,,$

 $p_r = xp_x + yp_y$, whose canonical partners are

respectively.

 $\phi = \operatorname{ArcTan}[y/x]$,

 $r = \text{Log}[x^2 + y^2]/2,$
