F1 and F2 are parameters to characterize the slope of the field at the edges defined as:

F1 = sgn(a) 
$$\sqrt{a}$$
,  $a = 24 \left( \frac{I_0^2}{2} - I_1 \right)$ ,  
F2 =  $I_2 - \frac{I_0^3}{2}$ 

(155)

(156)

with  $I_n \equiv \int_{-\infty}^{\infty} (s - s0)^n \frac{K_1(s)}{K_{10}} ds$ , (157)

$$J_{-\infty}$$

where  $s_0$  is the location of the edge where the effective length is defined, and  $K_{10} = K1/L$ .
